Assignment 1 - Vision Document

Christian Olsson

31 januari 2018

1 Vision

1.1 Introduction

When the book shelf at home grows full of books, it could get difficult to keep track of all literature contained within, even if they are organised and sorted. The book library is used to store information about books in an easy to read manner digitally on a computer. The information can then be retrieved from any device connected to the internet and equipped with a web browser.

Using the book library, books can be added and removed from the library, and it is possible to change or add information about books already in the library.

1.2 Requirements

1. The books shall be presented to the user with book title and author.

2. It shall be possible to add and remove books from the library.

3. It shall be possible to edit information on an existing book.

4. The following information should be available for each book:

    (a) Title
    (b) Author
    (c) Genre
    (d) Price
    (e) Date of publish
    (f) A description of the book

5. To make it easier to find a book in the list, it should be possible to search or filter the book list.
